REVOLUTIONIZING THE WAY BUSINESS MOVES

THE LATEST INNOVATION IN  
CORPORATE RELOCATION

**theRover<sup>®</sup>**

Patent No. 7,134,673 B2

**No Boxes, No Crates, Just Carts**

# Moving day used to be a day off.

**R**emember your last moving day? It was probably an endless stream of jam-packed boxes, packing labels and unhooked computers. And even after the move was completed, it would take days – or even weeks – to unpack all the files, get the computer networks up and running, and have the employees functioning at full capacity. The hassle of moving a company to a new office building, or just down the hall, costs a corporation with 100 employees an average \$12,500 in employee down time.

## Everyone knows that time is money.

By significantly reducing employee downtime, the Rover® provides a huge financial benefit. In addition, the Rover® offers a reduction in material costs, labor hours, and potential expenses for lost boxes or employee injuries. Corporations spend 6 billion dollars annually on relocation, but cost comparisons show that relocating with the Rover® costs 30% to 50% less than a traditional box move. A company will spend \$30-\$50 per employee for each move. Using the Rover® could save \$10-\$25 each time. Ask us how?

## Here's how simple moving day could be.

Your employee, Jane Smith, is given her own Rover®, which arrives fully assembled. Jane then begins to load the Rover® with all her files, computer equipment and personal belongings. Once Jane is finished packing, she can continue to work out of the Rover®, with full access to all

her files and equipment. The Rover® is then simply rolled onto a moving truck or to its new location. Even after reaching its destination, Jane can continue to work out of the Rover® and use it as storage space while she systematically unpacks in a new office. What could be easier?

David Ferron, Supervisor of Facility Services for Pitney Bowes, recounts moving day with the Rover®:

*"The Rover® is pushed into the office and the engineer now loads everything into it. There's a place for pendaflex files, books, magazines, and computer, including the monitor. Now we push the Rover®, which has great wheels, to the new location. It gets unpacked and now the employee is up and running. There's no heavy lifting involved for anyone and very little down time . . . everything is put away and there are no cartons to empty."*

Fran Lucero, Facility Project manager of Anthem Blue Cross/Blue Shield Center in West Hartford describes the Rover® as:

*"efficient, effective, and the best mode of moving I have used in the industry today."*

The **Rover**

MAKES MOVING DAY QUICKER, EASIER, AND LESS EXPENSIVE

# the 4D Mini **Rover**®

The ultimate moving solution for tight environments & small work stations. Measures only 24" x 27" x 59" high!

- **No Stacking Crates**
- **No Lifting Boxes**
- **Easy File Access**
- **Lockable & Secure**

## No crates. No boxes. No dollies.

**Just one Rover—for one employee—for one move.**

*Cart-Rite Office Moving Technologies* introduces the Rover®, a line of relocation carts that makes moving easier and more affordable. This all-in-one tool doesn't bog down employees with boxes, dollies or tape. Instead, just **one Rover® can hold all of an employee's files, equipment and personal belongings** at two to three times the capacity of moving boxes. The locking drawers and cabinets allow easy access before, during and after the move. **Loading and unloading is painless and no lifting is required.**

The **Rover**®

IT'S NOT ABOUT MOVING...IT'S ABOUT MONEY

**Drawers** may be configured to file from front to back or side to side, leaving room for personal belongings, books and binders.

**Cabinets** are designed to hold one to two desktop computers, peripherals, printers and fax machines.

**2DC**

Moves one employee's files, equipment & personal belongings

42" x 27" x 61" 70"-90" of filing | 22 cubic feet

## One Rover,<sup>®</sup> One Employee, One Move

**2D**

Moves the contents of a 3-drawer lateral file

42" x 27" x 38" 70"-90" of filing | 12 cubic feet

**3D**

Moves the contents of a 4-drawer lateral file

42" x 27" x 53" 105"-135" of filing | 17 cubic feet
